

A Short Biography of Michael Wells Mandeville

January 2005

How does a man combine a strong scientific orientation while dealing with the intangibilities of political, economic, and spiritual affairs? Mandeville earned his first technical qualifications by serving in the Navy for four years as an electronic technician. Ever since that meeting with electrons and magnetic storms while working with radar and radio on board ship, he has maintained a lifelong interest in the physical sciences. He

earned his intellectual spurs with nine years of study of history, science, economics, and psychology at the University of Washington. In 1972, he became a doctoral student in political theory and then applied his skills for 25 years as an artist and as a consultant in energy technology and small business planning. He broadened his interests while working for many small businesses by nourishing spiritual meditation practices.

By the early 1990's Mandeville began to follow the cold fusion controversy and was ready to jump into doing some fundamental research at the edge of the unknown. He took up the hunches of several cold fusion researchers and proved in a series of experiments that it was possible to use inexpensive electrochemical means to transmute radioactive elements into inert elements like lead and the catalytic metals.

During the middle of the 1990's, archeological and geological discoveries by a number of researchers and explorers stimulated Mandeville to explore Egyptian prehistory and take up the challenge to determine the validity of Edgar Cayce's stories of ancient Egypt. Cayce had made many clairvoyant statements about the ancient world and how geological change occurred. Mandeville undertook the challenge to prove or disprove them.

Mandeville found it easy to disprove conventional thinking and confirm many of Cayce's stories. Using Cayce's tips and clues, Mandeville assembled a large portfolio of many newly discovered facts which geologists, archeologists, geophysicists, oceanographers, paleontologists had discovered during the last fifty years. He discovered that the new facts painted a "big picture" which tended to corroborate Cayce's stories.

Mandeville began to outline the "big picture" in the *"Return of the Phoenix"* in 1994 and did not finish until three volumes were published in 2000. In the course of presenting and validating Cayce's notions about the past, Mandeville discovered and proved out his own original theories about the forces which shape the geology of the Earth. Using geophysical databases and several decades of findings from layers of sediments and ice, Mandeville was able to demonstrate that the off-center wobbling motion of the Earth, which is named Chandler's Wobble, is one of the primary causes of the movement of the tectonic plates, which in turn causes the waxing and waning of earthquakes, volcanism, and El Nino weather (by heating the ocean in the South Pacific from underwater volcanic heat vents).

This discovery he named "vortex tectonics". He was also able to demonstrate that the progressive drift of Chandler's Wobble had accelerated during the 20th century and that this had caused a fourfold increase in

A Short Biography Of Michael Wells Mandeville (cont.)

volcanic activity and earthquakes. Mandeville now argues that this is the most important cause of Global Warming.

Mandeville publishes this work informally on the WWW at michaelmandeville.com/earthmonitor and through a newsletter titled "The Earth Changes Bulletin".

At the start of the recent peak in sunspot activity in 2000, Mandeville began compiling a weekly update of solar and planetary activity to provide warnings about the severe droughts and floods which were devastating agriculture in many parts of the world.. He rapidly expanded this to include the political and economic affairs of humanity after he learned that previous research by many international scholars had shown that high sunspot counts profoundly influence the emotional and mental reactions of people.

While tracking the influence of the sunspot cycle on human affairs, Mandeville began to chronicle how the manipulations and deceptions of the American right wing and Zionist oriented lobbies were amplified by key American political leaders and the Mass Broadcast Media in North America into a strong push for war in Iraq. Mandeville concluded that the highly emotional drive to expansion of war in Iraq by the Bush administration and the Israeli government during 2002 and 2003 was irrational at its core, was entirely based on deceptions and illusions, and might achieve the opposite of the stated goals and intentions, and thus result in a decrease in global security.

Mandeville then wrote the "Coming Economic Collapse of 2006" to provide a brief synopsis of these observations. He wrote it in every-day language to help non-experts understand and cope with what is most likely to happen during the next several years. The events of 1999 to 2003 are discussed within the play of the long term economic and political cycles and objective trends of the world which have been set in motion by the invasive and domineering activities of the Bush administration.

Mandeville concluded the book with a discussion of how these cycles may play out during 2004-2008 within the highly reactive negative political trends which the renewed push of U.S. imperialism have generated during 2002 and 2003. Mandeville hopes to devote a good portion of the next few years to helping catalyze broad ranging international discussions about how the world as a whole can best rebuild a sound international political and economic system which is not based on unilateralist attitudes and behaviors.

Mandeville's website offers many sample chapters from his various books and provides details about how to obtain a copy of the books or the CDROM which contains the complete trilogy in web html and Word doc formats. For more details about Mandeville, his work, and the trilogy of the *Phoenix*, you may visit his website at: <http://www.michaelmandeville.com/>

Educational Programs & Backgrounding for Media On Edgar Cayce

Most people incorrectly use Cayce's material and make gross error in quoting him. Mandeville has complete documentation on Edgar Cayce and knows Cayce's material thoroughly, perhaps better than anyone else. He spent five years to establish an objective rate of accuracy for Cayce's statements, which run typically at 92%. In establishing this objective score, Mandeville has created a major scientific milestone in the annals of psychic science and has become the leading scientific expert on Cayce's predictions. He can immediately steer any query about Cayce's comments to a decisive result. He generally can relay very quickly what Cayce said or did not say on a wide range of topics.
